## Applications

## Package

**NPO** : Temperature compensation type, with little or no change in capacitance with variation in

temperature. hence, they are used in radio-frequency oscillators, precision timing circuits,

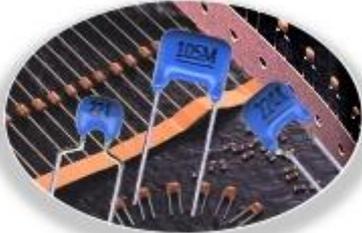

ultrastable amplifiers, etc.

**X7R** : Temperature stable type for by-pass and decoupling in radio and television receivers,

computer, servo systems, audio tone, and and coupling, etc... where moderate capacitance

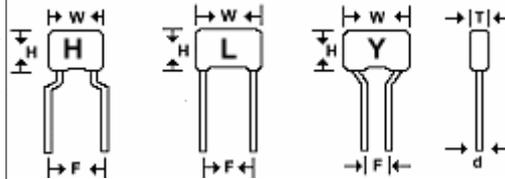

variations are permissible and dissipation factor is not critical.

**Z5U / Y5V** : General type for by-pass and filtering application.
